PROFESSIONAL SUMMARY

Front-End Engineer with a degree in Computer Science, currently pursuing a Master's in Software Engineering. Over 3 years of experience with Vue.js, TypeScript and modern JavaScript, building high-performance, scalable interfaces with a focus on componentization and Design Systems.

Experience in the financial market, with hands-on work in performance optimization and integration with RESTful APIs and WebSockets for real-time data. Collaborates in agile squads with Product Managers, Designers and Developers, prioritizing quality (automated testing, WCAG) and front-end architecture best practices.

CORE COMPETENCIES

Front-End Development, Front-End Architecture, Componentization, Design Systems, Performance Optimization, Real-Time Data (WebSockets), API Integration (REST, GraphQL), Accessibility (WCAG), Automated Testing, Code Review, Financial Markets, Agile Methodologies (Scrum, Kanban), Cross-Functional and Remote Collaboration, Technical Autonomy, Critical Thinking, Product Vision, Adaptability.

TECHNICAL SKILLS

Front-End: TypeScript, JavaScript (ES6+), Vue.js, React, Next.js, HTML5, CSS3, Tailwind CSS, responsive design

Architecture: Design Systems, componentization, scalable front-end architecture, Micro Frontends

Testing & Quality: Jest, Vitest, Cypress, accessibility (WCAG), performance optimization, code review

APIs & Integrations: RESTful APIs, GraphQL, WebSockets, asynchronous requests

Back-End: Node.js, Python (Flask), PHP (CodeIgniter)

Databases: MySQL, MongoDB

Cloud, DevOps & Build: AWS, Docker, Vite, Webpack, Git

Methodologies: Scrum, Kanban

PROFESSIONAL EXPERIENCE

Software Developer — Front-End

Nelogica | Porto Alegre, Brazil | April 2024 - Present

- Design, develop and maintain high-complexity, high-performance Vue.js and TypeScript applications for the financial market, used by thousands of concurrent users.
- Migrated the codebase from JavaScript to TypeScript, reducing front-end rework.
- Built reusable components aligned with the company's Design System, reinforcing consistency and componentization best practices.
- Optimized the performance of charts and critical screens, reducing rendering time and improving application speed and user experience.
- Implemented accessibility improvements (WCAG) and automated tests (Jest, Vitest, Cypress).
- Integrated applications with RESTful APIs and WebSockets, handling asynchronous requests and real-time market data.
- Architected a local cache solution (OPFS) for the Times & Trades module, eliminating the full reload of history via WebSocket on every reopen — re-fetch overhead validated at 10% to 50% above the theoretical minimum.
- Contributed to code reviews, Git version control and the evolution of the front-end architecture (Vite/Webpack).
- Collaborate with Product, UX/UI designers and back-end developers on defining flows and technical decisions, integrating the front end with server-side logic.

ICT Resident

Brisa (project in partnership with Unisinos) | Rio Grande do Sul, Brazil | September 2025 - March 2026

- Owner of the weather station project (LabClima), with visibility over the entire solution architecture: took part in building the data-collection sensors, implementing the in-house Python (Flask) API with a MySQL database, and the React data-visualization dashboard.

– Implemented real-time data consumption via WebSockets and scheduled routines, integrating the in-house Python (Flask) API.
– Contributed to defining statistical forecasting models and to technical and UX decisions in an agile (Scrum) environment.
– Used Docker (containers) to standardize the development environment.

Front-End Developer (Intern)

Compass UOL | Remote | May 2023 - October 2023

– Developed responsive web applications with React, Next.js, TypeScript, JavaScript, HTML and CSS, including dynamic routes and REST and GraphQL integrations.
– Worked in agile (Scrum) teams with code review practices and version control via Git and GitHub.
– Worked with AWS services on front-end projects, including build, deployment and monitoring.

Full Stack Developer (Intern)

Universidade Federal do Pampa (UNIPAMPA) | Alegrete, Brazil | July 2022 - March 2023

– Developed an internal academic system in PHP/CodeIgniter for scoring faculty output, replacing manual spreadsheets and improving data organization.
– Created responsive layouts and interfaces following UX best practices.
– Took part in gathering, validating and refining requirements with end users.
– Used Docker (containers) to standardize the development environment.

EDUCATION

Master's in Software Engineering

Universidade Federal do Pampa (UNIPAMPA) | July 2025 - July 2027 (expected)

Research in Artificial Intelligence applied to educational contexts (Python, intelligent systems).

Bachelor's in Computer Science

Universidade Federal do Pampa (UNIPAMPA) | March 2018 - December 2023
